

ANCHOR INSTITUTION & IRU LOCATIONS WITH DROP CABLE FIBER STRAND COUNTS

1/30/11

Also statistics on "Original" and "Additional" Anchor Institution Locations

All drop cables are either 1-strand, 12-strand or 24-strand. 1-strand drop cables in the FTTP zones will be connectorized at the curb. Outside the FTTP zones, the 1-strand drop cables for Anchors with AE equipment will be fusion spliced at the curb. 12- and 24-strand cables will always be fusion sliced at the curb. All IRU locations will get at least twice the number of strands on their drop cable as that organization has strands on the associated ring to enable ringed architectures.

Most AE locations will have a single strand drop cable. Some AE locations may have multiple tenants or have the potential to need more than one strand, although only one strand will initially be spliced through for each initial customer. The FUTURE locations are multi-location organizations that potentially could rent dark fiber in the FUTURE. Initially a single strand would be fusion spliced for each of these FUTURE locations as well.

COLO	Locations where multiple Anchors Share a common building
NEW	New City sites nominated on 1/17/11
New FTTP SITES	SITES that are new to this list, but are in the FTTP area and are "free"
